

Quarter 3 Stop & Search Performance Pack 1 October 2023 31 December 2023 Text Only

Ethnicity Changes and Calculations

Reporting on ethnicity occurs in a number of ways. Officers will ask individuals for how they define their own ethnicity and record this under 'Self Defined Ethnicity'. Officers also record their own perceptions of the individual's ethnicity under 'Officer Perceived Ethnicity'. Evidently, it is often the case that individuals refuse to define their own ethnicity and these will be recorded as 'not stated'.

In this report we combine Officer Perceived with Self Defined where an individual has refused to state their ethnicity.

However, there is a page that doesn't do this. This is the 'Not Stated by Individual: LPA breakdown' page.

Where the page does not use Officer Perceived as a substitute when an individual has refused their self-definition this will be made clear on the page.

Please note, a population table is now provided at the end of the pack.

Disproportionality calculations

This analysis uses the *Relative Rate Index (RRI)*, otherwise known as a disproportionality ratio. This allows for quick and easy measurement of disproportionality at various different decision points.

An RRI of 1 means there is no racial disproportionality between groups. Disproportionality is greater the further away from 1 the number is.

Let's say, for example, that the Asian disparity ratio was 1.3. We could express this as 'Asian people are 30% more likely to be stop and searched than White individuals'.

Disproportionality is calculated using the following formula: (searches of ethnic minority/population of ethnic minority)/(searches of white people/white population)

Per 1000

This is calculated through the following formula: number of searches/(divided by population/1000)

Information Page

This pack covers Quarter 3 in the Financial Year 2023-2024, or 01/10/2023-31/12/2023.

There were 4,031 searches in Q3 with an overall disproportionality ratio of 1.85. There were 1.60 searches per 1000 of the population. Body Worn Video compliance remained high, with 141 searches without it being used.

Disproportionality remained highest for those of Black ethnic origin with a ratio of 4.02. This means a Black person was around 4 times as likely to be searched as a White person in Q3. This group also had the highest disproportionality ratio for both drugs and weapons searches.

A new page has also been added to look at find rates and section 60 searches, of which there were in Q3. The primary positive outcome rate for all searches was 30.0%, meaning the item searched for was found 30.0% of the time.

Power Used and Outcomes.

This page shows the total number of searches by LPA, and also show the powers used and outcomes. The tables entitled 'Power Used' and 'Outcome' show the Top 10 Powers Used and top 10 Outcomes. The Donut Charts show the percentage proportion of the top 5 that each Power or outcome equates to. For a population table, please see the end of the document.

Find Rate and Section 60.

This page breaks down the find rate across TVP on the top half and then also information for Section 60 searches on the bottom.

This is a new page and so remains in development.

The tables entitled 'Positive Outcomes rate', shows the positive outcomes from searches over a two year period. The lighter blue line shows outcome rate for the object searches for, and the darker blue the find rate for objects other than that searched for.

The table next to it shows the primary and secondary find numbers for each LPA.

On the bottom half of the page you will find information relevant to Section 60 Searches.

This includes a basic count of the number of S60 searches that quarter, and then LPAs that have had the most section 60 searches. It also shows the article found information specific to S60s along with outcomes. Finally, it shows the percentage of S60 searches conducted on ethnic minorities.

Stop Search Weapons.

This page shows the number of weapons searches that took place this quarter.

Weapons searches incorporate searches for offensive weapons, pointed/bladed articles, firearms, and crossbows.

The Table on the top left breaks down number of searches for weapons, number of searches of ethnic minorities, rate per 1000 for ethnic minorities, and then disproportionality for all ethnic minorities.

The donut chart next to it shows the different kinds of weapons search a proportion of all weapons searches.

The table entitled 'Outcomes' shows the top 10 outcomes from weapons searches.

Finally, the table entitled 'Items Found' shows how often the articles searched for were found and not found etc.

Notes

All population statistics are taken from the 2021 Census published 29th November 2022.

Why use per 1000 population?

Showing the incidence rate per 1000 of population makes comparisons between different areas easier, especially when the population size in those areas differs.
